

News Page Component Implementation

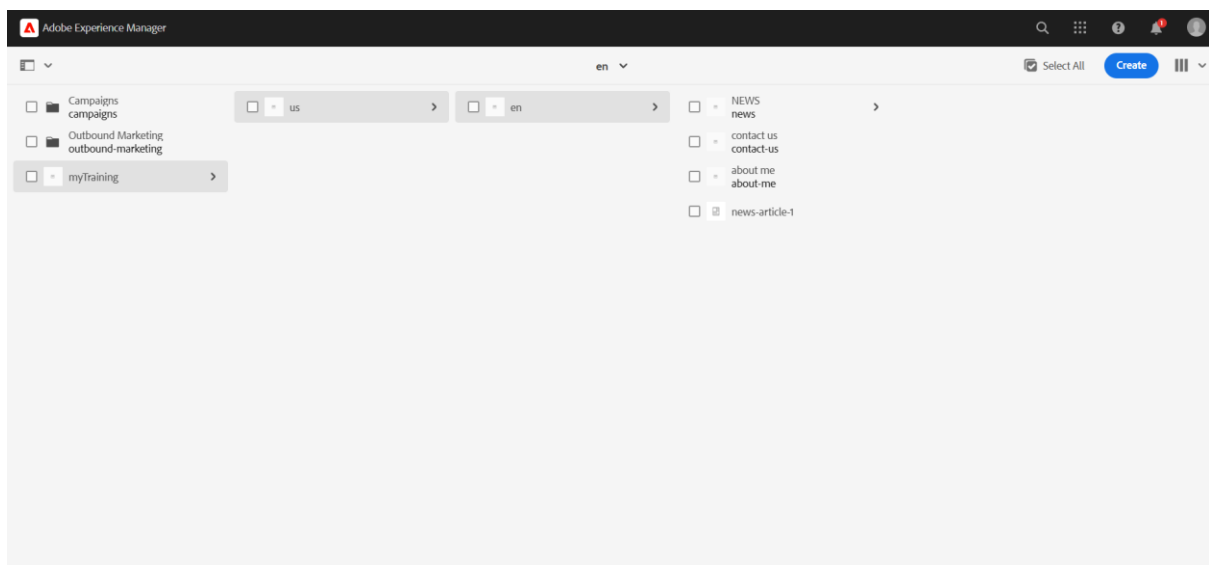

Creating News Page Component:

News Page Component is created using the Base Page Component to maintain a consistency in structure and functionality across different pages.

Custom Page Property:

A custom page property called About is created. This allows content authors to set a default news image that will be displayed when no specific image is provided for a news article.

Creating News Template Type:

A News Template Type is created using the News Page Component to standardize the layout and behavior of news pages.
